

# Applied Data Science Capstone

Final Presentation

# Empty slide

- This presentation is empty since it was not possible to download the presentation from the resources provided by coursera.

# Executive Summary

- In this project we use data science methods to determine the feasibility of our Space company SpaceY.
- We use the data provided by SpaceX for this.
- After data mining, cleaning, an explanatory data analysis and the evaluation of various machine learning models we were able to determine a lower performance boundary for our future enterprise.

# Introduction

- Space travel is more relevant then ever. Especially due to SpaceX.
  - Is it possible to outperform this company with clever data science?
- 
- In this project we use data science methods to determine the feasibility of our Space company SpaceY.

# Data collection and data wrangling methodology
